

Enterprise Mobility Management

Mobile Device Management

AirWatch® allows you to gain visibility into the devices – including smartphones, tablets and laptops – connecting to your enterprise network, content and resources. Quickly enroll devices in your enterprise environment, configure and update device settings over-the-air, and enforce security policies and compliance across your entire device fleet.

Mobile Application Management

AirWatch enables you to manage internal, public and purchased apps across devices enrolled in your organization. Distribute, update, track and recommend apps over-the-air with the AirWatch App Catalog. Build custom internal apps with the AirWatch Software Development Kit (SDK), or wrap existing internal applications for advanced security with AirWatch App Wrapping.

Mobile Content Management

AirWatch secures document distribution and promotes collaboration of corporate content anytime, anywhere in Secure Content Locker™. Store your corporate documents, email attachments and more in a secure container and protect sensitive files with user authentication, file encryption, geofencing, sharing limitations and offline viewing restrictions.

Mobile Email Management

AirWatch integrates with your existing email infrastructure to deliver comprehensive security for mobile email. Control device access to corporate email, utilize Secure Email Gateway and encrypt sensitive data to prevent data loss. Containerize email and provide a native user experience with AirWatch Email Client for Android and Apple iOS. Open email attachments in Secure Content Locker to maximize data loss prevention.

Mobile Browsing Management

AirWatch Browser™ is a secure browsing alternative to native browsers and provides corporations with the ability to configure customized settings to meet their unique business and end-user needs. AirWatch Browser allows administrators to define and enforce secure browsing policies for intranet sites without a device-level VPN, and enable secure browsing with whitelists and blacklists or kiosk mode.

Bring Your Own Device (BYOD)

AirWatch provides unprecedented choices over the types of devices you manage, without compromising security. Our flexible model can support corporate-owned, employee-owned and shared devices. Centrally manage all devices, protect users' privacy, allow users basic administration and secure corporate data.

Containerization

AirWatch Workspace provides complete separation of corporate and personal data on a device, ensuring corporate resources are secure and employee privacy is maintained. AirWatch enables organizations to standardize enterprise security and Data Loss Prevention (DLP) strategies across device fleets through a flexible approach to containerization with AirWatch Workspace. A secure containerized solution for all enterprise data including email, applications, content and browsing, AirWatch Workspace is managed at the application level without MDM, making it ideal for BYOD and high regulation deployments.

Company Differentiators

- The largest EMM provider, largest R&D staff and 1,500+ employees
- Trusted by thousands of global, security-focused organizations
- Recognized as the world's leader in enterprise mobility
- A Gartner MDM Magic Quadrant 'Leader' for three consecutive years*
- Worldwide offices with localized sales and support teams
- Fast growing global customer base across all verticals
- Worldwide support team and professional services organization
- Global relationships with leading channel and technology partners

Product Differentiators

- First to market, same-day support for new mobile platform releases
- Security focus at the core of product development
- Multi-tenant, highly scalable and redundant architecture
- Seamless integration with existing enterprise systems
- Flexible deployments in the AirWatch Cloud or on-premise
- Multiple languages supported
- Most advanced solutions at the most competitive price

Professional Training, Services and Support

AirWatch offers comprehensive global training, professional services and support to ensure your organization has the resources it needs for a successful mobile deployment. The AirWatch professional services team offers the technical knowledge, industry experience and resources to ensure a successful implementation across your organization. Get up and running fast with quick start packages, and maximize the value of our solution with health check and support packs. Customers can utilize either self-guided or instructor-led training courses and our global support is available 24/7/365. Customers also have access to myAirWatch resources and a dedicated Account Manager.
